

ENEOS LC Co., Ltd.
July 2022

To our valued customers

Termination of Our Liquid Crystal Film and Polymer Particle Businesses (Notice)

We deeply appreciate your loyal patronage of both of our businesses.

We have been releasing various photonics material products out into the world for over 20 years since our establishment as a phase difference film manufacturer, and after the liquid crystal film and polymer particle businesses were transferred from ENEOS Corporation to us. However, our corporate performance has been sluggish over the past few years because of the difficulty in keeping up with the current trends in the liquid crystal display industry that has been changing significantly.

As a result of a recent review of the business portfolio by ENEOS Corporation High Performance Materials Company, it was determined that we will withdraw from the photonics material business. As a result of this, our liquid crystal film and polymer particle businesses will also be terminated as shown below.

Before terminating these businesses, we would like to discuss the build-up of stock with you so that we can continue supplying our products for a certain period of time from now.

We deeply apologize to our customers who have been using our products for making this decision, and extend our deep appreciation to you for your long-term business.

1. Relevant products
Film products (NV films, NH films, and cholesteric films) of all grades
Uni-powder products of all grades
2. Date of termination of our businesses
March 31, 2023
* As of now, we plan to continue to manufacture our products until the required stocks are built up (it is noted that the plan is subject to change).

ENEOS LC COMPANY, LIMITED
